EDUCATION

Georgia Institute of Technology

MS Computational Science and Engineering

Atlanta, GA

Aug 2022 – Dec 2023

- GPA: 4.0/4.0
- Project: Improving the scalability of machine learning model serving in soft real-time systems

University of Hong Kong

BS Physics

Hong Kong

Sep 2016 – Aug 2021

- GPA 3.76/4.0
- Thesis: Using maximum likelihood estimation to measure electron charge flip rate at the ATLAS detector

EXPERIENCE

General Motors Financial

Dallas-Fort Worth, TX

Data Scientist II

Sep 2025 – Present

- Collaborate with business to understand company needs and translate into well-defined Data Science problems.
- Lead and enforce adoption of **Git** version control and good coding practices to facilitate team collaboration.
- Apply **Propensity Score** methods to improve accuracy of customer risk scoring models on rejected applications.

Data Scientist I

Apr 2024 – Sep 2025

- Performed comprehensive data analyses to help stakeholders make data-informed business decisions.
- Facilitated transition of scoring models to **LightGBM** from traditional scorecards.

Data Scientist Intern

May 2023 – Aug 2023

- Enhanced risk scoring model by implementing **SMOTE** oversampling technique, achieving 5% higher AUCROC.
- Performed feature selection for risk scoring model with **PySpark**, **XGBoost** and **SHAP**.

Georgia Institute of Technology

Atlanta, GA

Graduate Research Assistant

Jan 2023 – Dec 2023

- Spearheaded **data engineering** efforts for campus meter data infrastructure, encompassing approximately 10000 meters.
- Implemented CI/CD and data pipelines utilizing **Docker** and **Apache Airflow** to streamline ETL processes.
- Leverage **Postgres (PostGIS)** geo-spatial database to facilitate development of models to simulate region energy trends.

Meta Air Labs Ltd.

Hong Kong

Full Stack Developer

Jun 2021 – Aug 2022

- Designed and built high-throughput cryptocurrency transaction systems with **Kafka** on **AWS**, supporting a sustained load of 2,000 transactions per second.
- Utilized Grafana to create real-time dashboards, simplifying system monitoring and enhancing user insights.

Dah Sing Bank Ltd.

Hong Kong

Fintech Intern

Jul 2019 – Jun 2020

- Assisted in development of new E-Banking system using **Java Spring Boot** and **Angular** with Agile methodologies.
- Implemented CI/CD pipelines in **Jenkins** to automate release builds, enabling rapid software iterations.
- Undertook critical architectural tasks, including infrastructure design, firewall configuration and data migrations.

PROJECTS

Federated Learning of Generative Large Language Models via Knowledge Distillation

Oct 2023

- Enable knowledge distillation of generative LLMs such as Llama-2, GPT-2 within Federated Learning regime
- Allow decentralized and resource-constrained devices to effectively produce a strong language model without loss of privacy

Power Map – Hackathon Winner | Python, Decision Trees, GCP

Feb 2023

- Developed predictive model using **LightGBM** tree boosting model on weather and building data.
- Implemented model deployment using **GCP** onto a website, enabling energy usage predictions of buildings across the US.

Blockchain Transaction Network Visualization and Anomaly Detection | Neo4J, React

Nov 2022

- Transformed the Ethereum transaction network into a graph utilizing **Neo4J**, facilitating comprehensive visualization.
- Employed **Graph Neural Networks** to identify potentially malicious actors within the blockchain network.

SKILLS

Machine Learning: Probability & Statistics, Data Visualization, Model Serving and Inference, LLM Fine-Tuning

Programming: Python, SQL, SAS, PyTorch, Scikit-learn, Numpy, Matplotlib, C++, NodeJS

Platforms & Applications: Linux, Git, Docker, AWS, Spark/Databricks, Kafka, REST API, Tableau
